

FOR IMMEDIATE RELEASE

Zeliot and BytEdge Unite to Set a New Standard in Real-Time, AI-Powered Intelligence from Edge to Cloud

Bangalore, India & Duluth, Georgia, USA - August 15, 2025

Zeliot, the company behind *Condense*, a Kafka-native real-time streaming platform, and BytEdge, an AI-powered predictive intelligence leader in edge-to-cloud analytics, today announced a strategic global partnership to redefine how enterprises turn operation data into intelligent action.

The partnership combines Zeliot's streaming-first infrastructure with BytEdge's AI-powered analytics to deliver instant operational insights, predictive maintenance, and adaptive intelligence at scale. The joint solution addresses the urgent industry need for real-time visibility, predictive diagnostics, and faster decision-making, helping enterprises reduce downtime, optimize asset performance, and accelerate digital transformation.

*"In industries where every minute of downtime can cost millions, our partnership with BytEdge gives enterprises the speed, scale, and intelligence needed to transform raw telemetry into actionable decisions instantly." said **Anup Naik, CEO of Zeliot**. "By combining Condense's streaming capabilities with BytEdge's AI expertise, we're giving customers a unified platform that not only ingests and processes data in real time but also injects deep, domain-specific intelligence into every decision."*

With more than 275,000 connected devices and over 2,000TB of annual data processed via Condense, and BytEdge's AI suite trained on over 6TB of operational sensor data spanning 4 billion miles, customers benefit from proven accuracy, low latency, and production-ready scalability.

*"This is about more than joining two platforms, it's about delivering a ready-to-use, edge-to-cloud intelligence at a global scale." Said **Dr. Amit Shekhar, CEO of BytEdge**. "By embedding our Agentic AI models, autonomous, self-optimizing agents, directly into Condense's streaming pipelines, we remove integration barriers and give customers unprecedented visibility from the edge to the cloud. These agents continuously adapt, apply intelligent transforms, and deliver actionable insights in real time. Customers can deploy faster, automate decision-making, and achieve measurable results from day one.."*

Unifying the Joint Value Proposition

- **Streaming-Native + AI-Driven Intelligence**
Real time data streaming enriched with pretrained, domain-specific AI models for immediate, actionable insights.
- **Predictive Asset Optimization and Maintenance**
Customers can anticipate and prevent costly failures while maximizing asset performance and safety.
- **Edge-to-Cloud Visibility**
Unified view from data capture to action, across distributed environments.
- **Faster Time-to-Value**
Go live in weeks, not months, with prebuilt connectors, industry-specific AI transforms, and agentic intelligence models that continuously learn and adapt to your data, ensuring faster ROI and reduced operational risk.
- **Industry-Scale Flexibility**
Designed for automotive, logistics, manufacturing, field services, and smart mobility, scalable from thousands to millions of connected assets.

About Zeligot

Zeligot is the company behind *Condense*, a Kafka-native, fully managed platform for real-time data streaming and event-based application orchestration. Purpose-built for modern enterprises, Condense provides a complete streaming control plane with built-in transforms, 150+ production-ready connectors, GitOps-native logic, and support for Bring Your Own Cloud (BYOC) deployments. With Condense, teams can build and scale real-time applications for mobility, manufacturing, logistics, and energy without the friction of infrastructure or middleware integration.

About BytEdge

BytEdge is a leader in Agentic AI-powered predictive intelligence, delivering domain-trained, autonomous AI agents for real-time diagnostics, digital twin modeling, and design optimization. Its product suite: RealEdge, PredictEdge, and DesignEdge leverages extensive sensor data and built-in domain templates to provide production-grade insights for mobility, logistics, and industrial clients. With hybrid edge-to-cloud execution and direct integration into platforms like Condense, BytEdge transforms operational data into

precise, context-aware actions that improve up-time, reduce costs, and accelerate innovation. Headquartered in Duluth, Georgia, with operations in New Delhi, Pune, and Hong Kong, BytEdge serves enterprises worldwide.

A Shared Vision

Zeliot and BytEdge share a commitment to helping enterprises operate smarter, faster, and more profitably in a time where data velocity and accuracy define competitive advantage. This partnership represents a leap forward, not just in technology integration, but in enabling an entirely new standard for intelligent operations from edge to cloud.
